

Project Beacon Database Schema Overview

The 9 Main Storage Sections (Tables)

1. USERS & TEAM What it stores: Name, email, password, role (owner, recruiter, or contractor), which contractors a recruiter manages, account status Why we need it: To know who is using the system, what they're allowed to see, and who reports to whom

2. LEADS (Candidates) What it stores: Candidate name (or a masked label if identity isn't confirmed yet), country, contact info, languages, services offered, years of experience, which recruiter owns it, current pipeline stage, priority Why we need it: This is the core record — every candidate the team is tracking, sourcing, or reaching out to

3. LEAD HISTORY & FLAGS What it stores: Every time a lead's stage changes (and why), plus special flags like Do Not Contact, On Hold, or High Priority, and who set each flag Why we need it: To keep a full paper trail of how a lead moved through the pipeline, and to protect against re-contacting someone who opted out

4. OUTREACH & CONVERSATIONS What it stores: Emails and messages sent to candidates, which channel was used (email, LinkedIn, WhatsApp, etc.), whether a message was AI-drafted, and the full back-and-forth conversation Why we need it: To track every touchpoint with a candidate and to review AI-drafted messages before they go out

5. EMAIL REVIEW QUEUE What it stores: Draft emails waiting for a recruiter's review, their status (AI Drafted / Follow-up / Needs Review), and the candidate they're for Why we need it: No outreach message goes out without a human checking it first — this is that checkpoint

6. CLIENT DEMAND (Staffing Requests) What it stores: Which client needs which language and service, how many people are needed, how many are filled, deadlines, and priority Why we need it: To show the team where the gaps are — what languages and services are needed but not yet staffed

7. CONTRACTOR PROFILES What it stores: A contractor's rates, availability, languages, portfolio links, resume, and notification preferences Why we need it: Contractors manage their own information, and recruiters need it to match them to the right opportunities

8. RECRUITER PERFORMANCE What it stores: How each recruiter is scoring against the team's rubric (outreach volume, response time, follow-up consistency, and more), month by month, with an overall score and trend Why we need it: To give recruiters clear, fair feedback and to help managers spot who needs support or coaching

9. ALERTS (Escalations) What it stores: Automatic warnings the system raises — a recruiter falling behind, an SLA about to be missed, a queue backing up — along with who's responsible and what to do about it Why we need it: So problems surface on their own instead of being found by accident

How These Tables Are Connected (The Links)

USERS are the main owners and operators of everything

USER (Owner / Recruiter / Contractor)

|

└─→ LEADS (Recruiter owns/claims multiple leads)

| |

| └─→ LEAD HISTORY & FLAGS (Each lead's journey is tracked)

| |

| └─→ OUTREACH & CONVERSATIONS (Each lead gets messaged)

| |

| └─→ EMAIL REVIEW QUEUE (Drafts wait here before sending)

|

└─→ CONTRACTOR PROFILE (Contractor manages their own info)

|

└─→ RECRUITER PERFORMANCE (Recruiter is scored monthly)

|

└─→ CLIENT DEMAND (Recruiter owns a staffing request)

ALERTS (Watches every table above and flags problems automatically)

Relationship Meanings (Simple Terms)

Link	Meaning	Example
Recruiter → Lead	Recruiter owns or claims it	Riya claims Lead #A-1042 from the shared pool
Lead → Lead History	Every stage change is logged	Lead #A-1042 moved from New to Contacted on Monday
Lead → Outreach	Lead gets messaged	Riya emails Lead #A-1042 about a dubbing role
Recruiter → Email Queue	Recruiter reviews AI drafts	Riya approves an AI-drafted follow-up before it sends
Contractor → Profile	Contractor keeps their info current	Alex updates his rate and availability
Client → Demand	Client requests staffing	Client Alpha needs 5 German dubbing artists
Recruiter → Performance	Recruiter is scored each month	Divya scores 84/100 in July, trending up
System → Alerts	System flags a problem automatically	Contractor B's activity has stalled — alert raised

The Data Flow: One Lead's Complete Journey

Timeline:

1. **A candidate is found on LinkedIn or ProZ**
 - Data stored in: LEADS table
 - Lead tied to: the recruiter or contractor who found them
2. **The lead is enriched — experience, languages, and history are filled in**

- Data stored in: LEADS table (enrichment fields)
 - Status updates from "Pending" to "Complete"
3. **If the candidate's identity isn't confirmed yet, they're shown with a masked label**
- Data stored in: LEADS table
 - Example: shown as "Lead #A-1042" until confirmed, never guessed at
4. **The lead is claimed by a recruiter (if it came from the shared pool)**
- Data stored in: LEADS table
 - Claim tied to: the recruiter, with a timestamp
5. **A recruiter reaches out — email or LinkedIn message**
- Data stored in: OUTREACH & CONVERSATIONS table
 - If AI-drafted, it first sits in: EMAIL REVIEW QUEUE for approval
6. **The candidate replies, and the conversation continues**
- Data stored in: OUTREACH & CONVERSATIONS table
 - Every message logged with who sent it and when
7. **The lead moves through the pipeline — Contacted, Replied, Negotiating, and so on**
- Data stored in: LEAD HISTORY table
 - Every stage change logged with a reason, if one is given
8. **If the candidate opts out, a Do Not Contact flag is set**
- Data stored in: LEAD HISTORY & FLAGS table
 - Flag tied to: the lead, with who set it and why
9. **The lead is eventually onboarded, marked Cold, or closed**
- Data stored in: LEADS table
 - Closure reason logged for future reference
10. **Meanwhile, the recruiter's activity on this and every other lead feeds their monthly score**
- Data stored in: RECRUITER PERFORMANCE table

- Score reflects outreach volume, response time, follow-through, and more

11. If something falls behind — a reply is late, a lead goes stale — the system raises an alert

- Data stored in: ALERTS table
 - Alert tied to: the recruiter, the lead, and what needs to happen next
-
