

Clay Monthly Cost — Quick Reference

Project Beacon — what Clay actually bills, by plan and by key (managed vs. bring-your-own), condensed to tables. Full sourcing, quotes, and caveats: [Clay_Pricing_BYOK_vs_Managed_Report.pdf](#).

Compiled 2026-08-31 · Sources: [clay.com/pricing](#), [clay.com/faq](#), [university.clay.com/docs](#)

1. Plan tiers — fixed monthly cost

Plan	Price / mo	Data Credits	Actions
Free	\$0	100	500
Launch	\$167 annual · \$185 monthly	2,500–3,000*	15,000
Growth	\$446 annual · \$495 monthly	6,000	40,000
Enterprise	Custom (annual)	100,000+	200,000+

*Clay's own pages disagree: pricing page says 3,000, docs say 2,500 for Launch — confirm in your own Plan & Billing page.

2. Managed key vs. bring-your-own-key (BYOK)

	Data Credits	Actions	AI token rate
Clay-managed key	Charged per successful lookup	Charged (1 per enrichment)	Provider rate +20% markup
Your own key	\$0 to Clay	Still charged (1 per enrichment)	Provider's list rate, no markup

BYOK requires Launch plan or above, plus provider-side tier minimums: OpenAI Tier 2+, **Anthropic Tier 4+ (≥400K TPM)**, Gemini Tier 2+. Check [console.anthropic.com](#) — Tier 4 is not a default account tier.

3. AI enrichment cost per lead (this project's measured Claude+web_search rates)

Model	Managed (\$/lead)	BYOK (\$/lead)	Saved by BYOK
Claude Sonnet 5	$\$0.28 \times 1.20 = \0.34	\$0.28	\$0.06 (20%)
Claude Opus 5	$\$0.58 \times 1.20 = \0.70	\$0.58	\$0.12 (20%)

Plus ≈\$0.01 Clay Action fee per lead either way — Actions are billed regardless of BYOK. The 20% markup on tokens is the only thing BYOK removes.

4. Projected monthly AI-enrichment bill, by volume

Leads / mo	Sonnet Managed	Sonnet BYOK	Opus Managed	Opus BYOK
100	\$34.60	\$29.00	\$70.60	\$59.00
500	\$173.00	\$145.00	\$353.00	\$295.00
2,000	\$692.00	\$580.00	\$1,412.00	\$1,180.00
5,000	\$1,730.00	\$1,450.00	\$3,530.00	\$2,950.00

"Managed" = paid to Clay as Data Credits. "BYOK" = paid directly to Anthropic, plus the ~\$0.01/lead Action fee still owed to Clay. Numbers are the AI-enrichment step only — they exclude every non-AI data-provider column (email/phone/company lookups), whose per-provider rates Clay doesn't publish.

5. Does that fit in your plan's included Data Credits? (managed key, worst case — no volume discount)

Leads / mo	Sonnet: credits used	Opus: credits used	Fits which plan?
100	≈ 692	≈ 1,412	Launch (2,500–3,000)
500	≈ 3,460	≈ 7,060	Sonnet → Growth · Opus → over Growth
2,000	≈ 13,840	≈ 28,240	Over Growth — Enterprise or overage
5,000	≈ 34,600	≈ 70,600	Enterprise territory

Credit counts assume the \$0.05 baseline rate; Clay's per-credit price drops at higher volume, so real usage will consume somewhat fewer credits than shown. This is the AI step alone — add your other enrichment columns' credits on top.

What this can't tell you: your workspace's real blended \$/lead (AI + every other data-provider column) — that number only exists behind your Clay login at [app.clay.com/workspaces/1342561/settings/credit-usage](#). A failed lookup inside a waterfall is free (only the step that returns data is billed) — see the full report, §7, for the sourced quote.

Condensed from [Clay_Pricing_BYOK_vs_Managed_Report.pdf](#) (2026-08-31). All Clay policy figures sourced from [clay.com/pricing](#), [clay.com/faq](#), [university.clay.com/docs](#), fetched 2026-08-31. Per-lead Claude figures from this project's own measured Opus/Sonnet + web_search runs.
